

D-BOARD®

GRAPHIC CARDBOARD 100% RECYCLABLE

Ecological and versatile material

The D-Board is a graphic cardboard which is designed for flat printing, adhesion, glueing, stand construction, furniture, displays for different event and P.O.S.

It's production incorporates recycled cardboard with 100% recyvlable raw material.

The D-Board white is a structure reminiscent of the very durable flatter and smoother Honeycomb cells (8mm cells) which allows a more precise impression and offers an easy and clear cut. The boards with a thickness from 5, 10 and 16mm give us the freedom to create objects and structures in 3 dimensions at a low cost.

The D-Board brown colour is designed for all the jobs where you want to show the recycled and/or ecological side of your projects.

Models	D-Board white	D-Board brown
Quality	Honeycomb cells of 8mm	Honeycomb cells of 8mm
